

## ABSTRACT OF THE DISCLOSURE

A method for making figures/stripes on an article, including steps of: preparing an article as a substrate on which the figures/stripes are to be made; wrapping the surface of the substrate with a fiberglass fabric drenched with resin; placing at least one thin or slender covering material on outer face of the fiberglass fabric, the substrate, fiberglass fabric and the covering material together forming a wrapping body; using a binding means to bind the wrapping body to harden and pattern the fiberglass fabric; taking off the binding means after the wrapping body is hardened and patterned, whereby the fiberglass fabric is hardened to form an inner layer, the covering material being positioned on the outer face of the inner layer; painting resin on outer face of the wrapping body to form a transparent hardening layer around the wrapping body after the resin is hardened; and buffing the hardening layer to complete a product which presents the figures/stripes of the covering material.
